

Battery Charging Adapter Cable

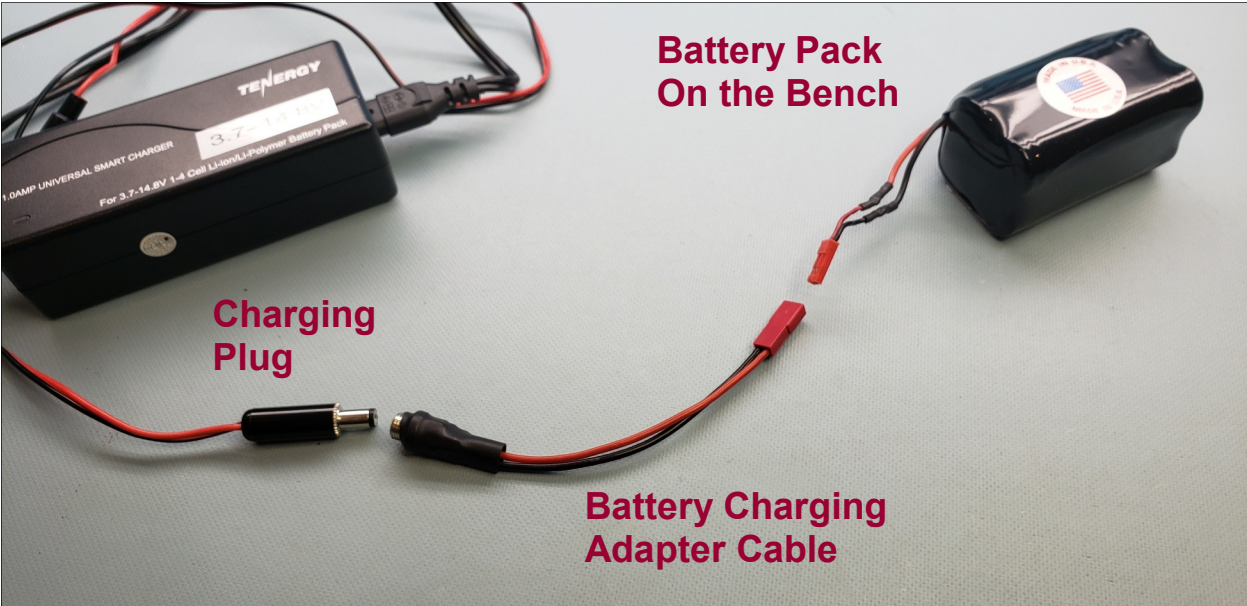

Our Battery Conversion Modules allow battery charging insitu (battery remains in the train). However, there may be times when you want to charge your battery packs externally; perhaps in preparation for battery swapping during a long open house or train show.

We always recommend using our Battery Connector Pair on your battery packs to allow for quick and safe removal. This also allows for battery swapping, instead of having your train out of commission while charging insitu.

The Battery Charging Adapter Cable allows you to connect your battery charger to an external battery pack.
